

Start-up Form Door Machine, DH5000T

Check the interior of the machine and remove any foreign material.
Check the scrap screens, drain strainer, and pump intake screen – make sure that they are installed and positioned properly.
Check the exhaust fan connection if applicable, must be a signal only. Our machine cannot power the exhaust fan. Check the chemical connections, must be connected to proper terminals.
Turn the main power ON at the breaker panel or fused disconnect switch.
Flip the Power Switch on the front of the Control Cabinet to the "ON" position. The power switch light will illuminate. Drain valve will close. The machine will begin to fill with water.
Allow the machine to completely fill with water. The water will shut off automatically and the heat will energize. Check for proper water level. Water level should be just below overflow.
Check for leaks and take corrective action if required. Pumps, seals (check during operation and setting idle) Valves Tank Seams Drains Detergent and rinse aid dispensers (supplied by others)
Monitor the tank thermometers for the proper temperature reading. Allow sufficient time for the wash tank heat to reach operating temperature. Wash 150° minimum Adjust the thermostat setting, if necessary (factory set). If not heating, reset hi-limit.
Close the doors fully, the wash cycle will begin automatically. The green in-cycle light will illuminate. The wash pump will start and run during wash cycle (chosen desired time). After wash cycle, the final rinse will begin and will rinse until end of cycle (chosen desired time).
Check door safety switch by opening door slowly; machine should shut down.
 Check the final rinse temperature during the final rinse cycle. The final rinse temperature must be 180° - 195° F. Adjust the temperature of the incoming water supply, if necessary. Adjust the booster thermostat setting if necessary. Check rinse arms for free rotation and final rinse nozzles for blockage (sediment), clean if necessary.
 Check the final rinse water pressure during the final rinse cycle. The final rinse pressure must be 20-22 PSI flow pressure Adjust the pressure reducing valve setting, if necessary. Check the incoming water line strainer, clean if necessary.

Start-up Form Door Machine, DH5000T

 Note: If the machine is equ 	ral cycles to assure proper cycle time and proper temperatures. ipped with an optional direct vent or Heat Recovery system, Customer to wait until the green in-cycle light goes out before	
 Flip the power switch on the control cabinet to OFF position. The power light will go out and the drain valve will automatically open for 10 minutes. If a longer drain time is needed, the power switch can be turned on and back off. This will allow for an additional 10 minutes drain time. 		
 Scrap screens, pump intak 	e drained after end meal period or every 2 hours of operation. e screens, and drain strainer must be cleaned. al for more detail instructions regarding operation, daily cleaning, e.
